LIFE AIS project

Main objective: to develop the information base for policy on environment and health, in term of improved management of pollen-related allergic respiratory diseases

RNSA actions B4: Objectives

“Aerobiological Information Systems and allergic respiratory disease management”

Case Study France: analysis of plant occupation of public green spaces

- General: to provide recommendations for plant occupation of public green areas.
- Specific:
 - 1) assess pollen counts (and allergen content) in public gardens
 - 2) on basis of the obtained results to formulate recommendations in order to protect allergic patients.

RNSA actions B4. Summary

- **WHAT:** Pollen count and allergens
- **HOW:** Pollen traps for analysis of local pollen dispersion:
 - Sigma 2 passive pollen trap (change slide daily)
 - Hirst pollen trap at proximity (change drum once a week)
 - Slides are analysing by the RNSA (in partnership with LHVP).
- **WHERE:** Public gardens in Paris and Lyon
- **WHEN:** 2 campaigns 16 weeks = 32 weeks
 - Campaign 1: March 2015 to mid-June 2015
 - Campaign 2: March 2016 to mid-June 2016
- **LEADER:** INSERM, RNSA will be coordinators of the field survey in their Centers (Paris and Lyon), UPMC will support the activities of the action.
- **Expected results:** field assessment of pollen count during pollen season. Study of distribution of pollen in public green spaces according to season. Recommendations on plant occupation of public green spaces.

RNSA actions B4: Pictures of the Hirst pollen traps in Paris

Paris Pasteur

The pollen trap is located on the roof of the Pasteur Institute in the 15th district.

*Long. 2°20 – Lat. 48°52 – Alt. 60 m –
pollen trap brand : Lanzoni– number of people concerned : 2 500 000*

Paris LHVP

The pollen trap is located on the roof of the LHVP (Laboratory of Hygiene of the city of Paris) in the 13th district.

*Long. 2°21 – Lat. 48°49 – Alt. 60 m –
pollen trap brand : Lanzoni– number of people concerned : 2 500 000*

RNSA actions B4: Pictures of the Hirst pollen traps in Lyon

Pollen trap Lyon

Lyon HEH

The pollen trap is located on the roof of the Hospital Edouard Herriot (HEH) in the 3th district in Lyon.

*Long. 4°53 – Lat. 45°44 – Alt. 52 m •
pollen trap brand: Lanzoni • number of people concerned: 1 000 000*

Lyon Gerland

The pollen trap is located on the roof of the Biomnis and Inserm Institut in the 7th district Gerland).

*Long. 0°38 – Lat. 44°12 – Alt. 48 m •
pollen trap brand : Lanzoni • number of people concerned : 1 000 000*

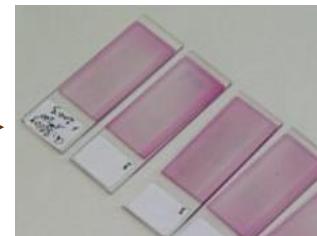

RNSA actions B4.

Material and Methods

- Sigma2-like traps (SLT): passive pollen trap
- SLT is composed on one hand of a transfer zone of air flow (high part) and on the other hand of a reception zone of particles by sedimentation (low part). Air flow goes through the trap in central zone, particles sediment and come on a coated slide disposed in the lower part of the trap
- The slides are changed every day
- Then the slides are send to the RNSA and analyzed with an optical microscope to obtain pollen counts (number of pollen grains by unit of time).

- + SLT Jardin des plantes
- + SLT Dalpayrat
- + Hirst Paris Pasteur
- + Hirst Paris LHVP

Paris

RNSA actions B4.

Presentation of the gardens

- Park de Choisy : It's a public garden of 43 000m² which was created in 1937.

Address : Avenue de Choisy 75013 Paris France.

2 SLT pollen traps have been installed and the slides are changed every day by trained staff from LHVP (Laboratoire d'Hygiène de la Ville de Paris) who work next to the park.¹²

RNSA actions B4. Presentation of the gardens

- Park Pierre Adrien Dalpayrat : It's a public garden of 9898 m² which was created in 1985.
Address : 2 Rue André Gide, 75015 Paris France.

1 SLT pollen trap has been installed and the slides are changed every day by trained staff from city hall of Paris ("service exploitation des jardins") who work in the park.

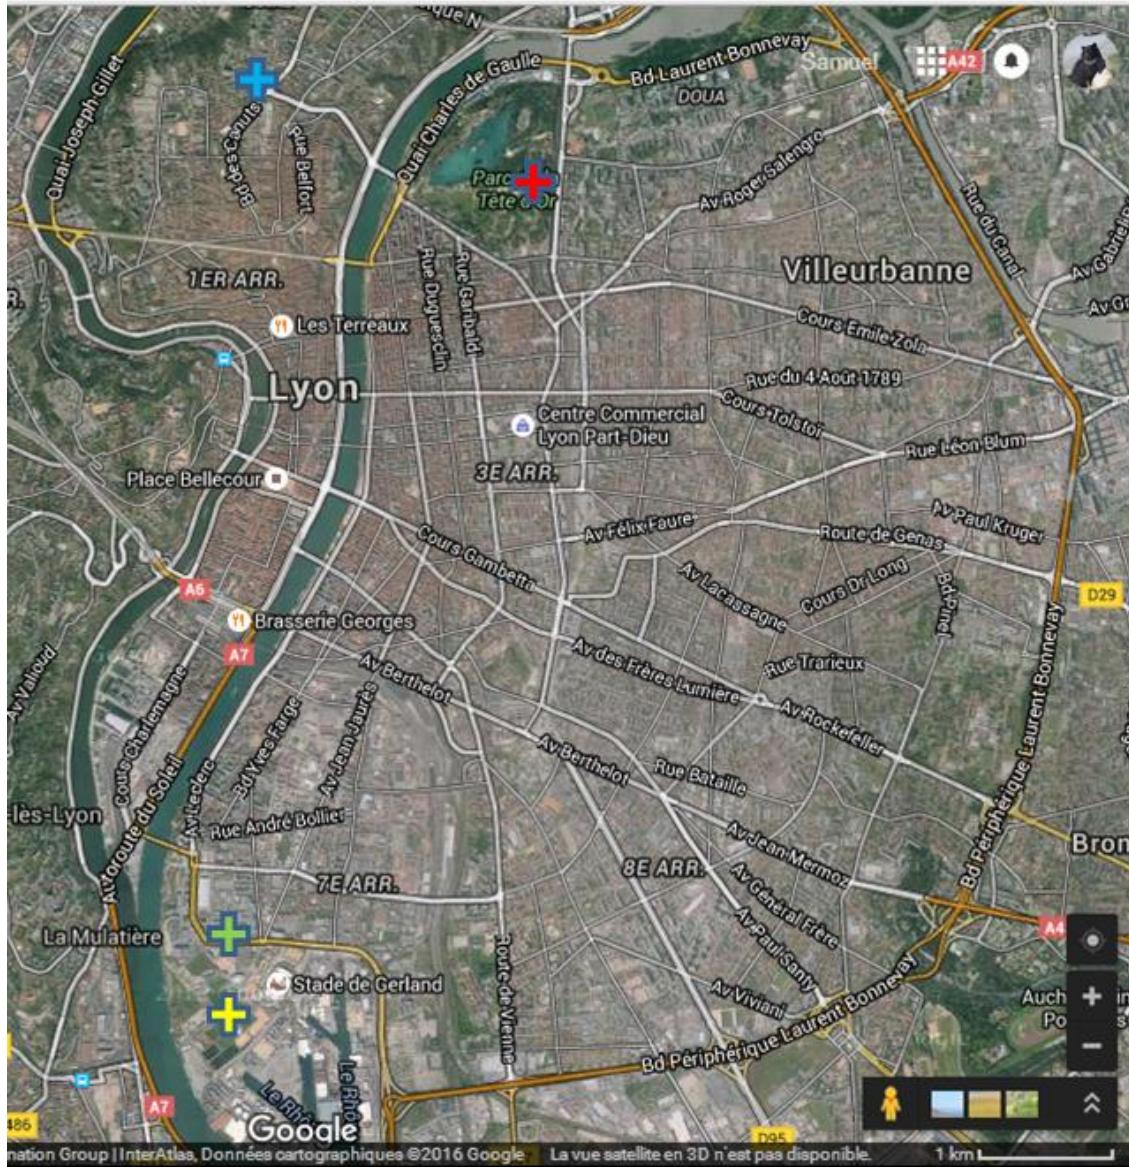

RNSA actions B4. Presentation of the gardens

- Park Jardin des Plantes du Museum d'Histoire Naturelle: It's a big public garden of 24 hectares open to the public for over 400 years with a wide variety of species.
Address : 57 Rue Cuvier, 75005 Paris France

1 SLT pollen trap has been installed and the slides are changed every day by trained staff from the natural history museum (MNHN) who works in the garden.

RNSA actions B4. Presentation of the gardens

- SLT Tête d'Or
- SLT Croix Rousse
- SLT Gerland
- Hirst Lyon Gerland

Lyon

RNSA actions B4.

Presentation of the gardens

➤ Park de la Tête d'Or :

The “Park de la Tête d’Or” is one of the bigger public park in France.

It was designed on the model of the English garden and was created in 1857.

Address : Boulevard de Stalingrad 69006 Lyon France

1 SLT pollen trap has been installed and the slides are changed every day by trained student staff from Lyon.

RNSA actions B4.

Presentation of the gardens

- **Park de Gerland:** It's the second bigger park in Lyon; it occupies an area of 18 hectares and was created recently in 2000.

Address : Avenue Jean Jaures 69007 Lyon

1 SLT pollen trap has been installed and the slides are changed every day by trained staff from “jardin des fleurs” of the park de Gerland in Lyon.

RNSA actions B4. Presentation of the gardens

- **Park de l'Hôpital de la Croix Rousse:** It's a park of 4.5 ha Located in the 4th arrondissement of Lyon next to the Croix-Rousse hospital. It was designed by René-Edouard André in 1913 and includes about 1200 trees.
Address : 103 Grande Rue de la Croix-Rousse 69004 Lyon France

1 SLT pollen trap has been installed and the slides are changed every day by trained student staff from Lyon.

Results of the two measurements campaign in Paris and in Lyon

Allergy potency

- Pollen allergy depends on several parameters such as the amount of pollen in the air, the sensitivity of people and the allergy potency of the pollen of each plant species
- **The pollen allergy potency of a plant species is the ability of its pollen to cause an allergy to a significant part of the population**
- **The pollen allergy potency can be:**
- **Low or negligible:** No problem to plant them in urban garden
- **Moderate:** Only a few species can be planted in the same garden
- **High:** This species cannot be planted in urban places
- Species or genus with a strong AP **in red** should be labeled as "**Not to be planted in habitation or residence area**", those with moderate AP **in yellow** should be labeled as "**Not to be planted in big quantities in habitation or residence area**". Other species with low or negligible AP **in green** may not be affected by public information.

Results Paris : Number of pollen grains for each alergenic taxa : March-June 2015 and March-June 2016

Salix (willow)	/	1	/	1	n

Legend :
 n = nothing to do
 I = limit the species
 r = remove the species

Conclusion 1/2

- The different results show that according to their locations, SLT pollen trap provide substantially similar results. The pollen seasons are the same on the Hirst and SLT pollens traps.
- Some taxa highlighted on the proximity pollens traps seem to be related to the surrounding vegetation (ex : Cupressaceae, Plantaginaceae, Platanus, Poaceae ...)
- . With this results, it is possible to inform the gardeners about the species which must be absolutely removed and the species which must not be planted in the future.

Conclusion 2/2

① www.vegetation-en-ville.org/que-faire/le-potentiel-allergisant/

- There are many allergenic species in the parks of the cities of Lyon and Paris like birch, cypress, plane tree We need to take into account the health impact in the choice of vegetal species to implant in green areas and avoid to plant allergenic species.
- With these results, a guide has been updated with recommendations for species to avoid and species to plant in the green areas and parks in France available on the website: <http://www.vegetation-en-ville.org/que-faire/le-potentiel-allergisant/>

Cryptomeria du Japon	Fauvetées	Fort
Tilleuls*	Tiliacées	Modéré
Ormes*	Ulmacées	Faible/Négligeable

*plusieurs espèces
** le pollen de platane est faiblement allergisant. Par contre, les micro-aiguilles contenus dans les bourres provenant de la dégradation des capitules femelles de l'année précédente sont très irritantes.
